

BROQUET ROLLS ON... HO HUP CHOOSES BROQUET

One of Malaysia's leading construction companies, HO HUP CONSTRUCTION COMPANY BHD., has been awarded all three parts of a major World Bank funded three year road asphaltting and rehabilitation project for Madagascar. The Contract was won against strong competition from a field of internationally known contractors, and is a testament to the growing worldwide reputation of the Company

For the project, HO HUP required a large quantity of construction equipment including mechanical shovels, road rollers, bulldozers, graders, tractors and road vehicles. All 118 pieces of this equipment was fitted with the Broquet fuel treatment catalyst, prior to shipment to Madagascar.

As with all major projects, it is essential that costs are controlled and savings made wherever possible, and the costs associated with fuel, fuel quality and vehicle maintenance, were of particular concern. Having previously used Broquet, and being aware of its fuel saving and engine cleaning benefits, HO HUP had no hesitation in specifying Broquet for all this equipment. An additional benefit of using Broquet in this environmentally sensitive country will be the resulting reduction in exhaust emissions.

A spokesperson for BROQUET INTERNATIONAL LTD., and its Malaysian Distributor BROQUET (M) SDN BHD, based in Kuala Lumpur, said that they were delighted that Broquet had been specified by HO HUP, and proud to be part of such a prestigious World Bank project.
